

Dr. Paul: [00:02](#) Hello, I'm Dr. Paul and this is my beautiful wife, Lynn. And today we're going to discuss how to make plasma energy affordable for those who are on a tight budget. And Lynn will give an introduction to this topic.

Lynn: [00:21](#) Well, first of all, sometimes I get a request of, you know, I'm on a tight budget, can't you make this fit my tight budget? And so I want you to know that every month we do some type of a special for people to make things more affordable for them. Let me give you an example. This month we have the plasma energy station and with that purchase you get over \$150 free phone magnets with the shungite silver Gans in the magnet for wifi, 5g microwave energy to support your body and you get a pendant and you get the new tech frequency relief vial. So that's the way that we're constantly putting something out there to make things a little more viable for people. There's often a second offering. And our second offering this month was order a Lyme relief vial and get a free mosquito vile. So if you watch the homepage every month, there's going to be something on there. And Paul, I'd like to ask you just plasma energy is a new idea and you're a retired veterinarian. So what, what did it take to learn about the plasma energy?

Dr. Paul: [02:00](#) Well, to get to the point to where we're at now, it's been about a three and a half years, three and a half to four years of study and work, experimentation and trial and error for a lot of things. There was a lot of misconceptions with the teaching because of the language barrier between the teacher and me. I had a hard time understanding him and so it's been difficult to get all of this information in a workable, usable format. My background as a doctor of veterinary medicine with the chemistry major made it a little easier because I understood the basic chemical components and procedures and workings, pathology, these types of things. But it's been a very time consuming and sometimes frustrating time getting all of this information into a workable, usable fashion.

Lynn: [03:37](#) Well, and wouldn't you also say that your background in studying acupuncture in an energy field help you, helped you to understand the whole idea of the plasma energy better?

Dr. Paul: [03:50](#) Right. The, the, the concepts of acupuncture, which I did on race horses was compatible with plasma energy theory. And so it wasn't completely foreign to me and it was a thing that I could accept because I knew that acupuncture worked and I knew that it was not on the basis of anything that I was taught in professional medicine in veterinary school. And so the two kind of melded together because of my attitudes and willingness to

accept the concepts of acupuncture and plasma energy as one continuous modality.

Lynn:

[04:56](#)

Well, the other thing that was also a factor in the whole learning process since Paul had difficulty in understanding the accent of the main instructor. I said, well, I'll just get in and type up the the weekly workshops. And sometimes there were two workshops a week. Well just get in and type those up. Well I said a mouthful when I did that because as it turned out, when you're typing from a video and you have to stop and go and then you have to replay to relisten to what you think you heard and make sure that's what you did hear. It turned out that an average for me of typing, getting 10 minutes of the workshop took about an hour. So if you add up the fact that these were four hour workshops, I bet off quite a piece when I said, well I'll just type these up for you., But it was useful to have that because then we could both go through them. And in that process I was also learning. I was learning the concepts and things like that. So we had the typing division and we had the working division. And so that's kind of the groundwork of, of what got is to this point.

Dr. Paul:

[06:24](#)

And you can see that we have a lot of time and effort and study involved in being able to bring this technology to you in a usable fashion. And so we don't feel like we're robbing anybody of anything, especially when you can duplicate all of the materials that we have and share it with your friends and neighbors. Or you can get two or three other people to go in with you and buy one product and duplicate it and share it among yourselves. So you can see this, that this is not a business model that's designed to make money. Like Pharmaceuticals for instance, or vitamins or supplements that you have to buy every month. Get on auto ship and every month they hit your credit card for 50 60 \$80 every month and ship something to you. And if you discontinue, then you no longer have that product. That's not the case here. You buy it one time and you've got it, you've got it from then on and it does not lose its potency. And you could duplicate it and share it with other people.you know.

Lynn:

[08:10](#)

I think we have a cat who wants to be in the video. Her paw was coming up your arm. Well, the other thing, let's, let's talk about replication here because let's say you've ordered a vial of arthritis relief, and I've got a whole product list here. So let's look at arthritis relief. It's \$77 and let's say that's a little bit of a stretch for your budget, but maybe, you know, two or three more people who also have arthritis issues. Now, if three of you went in together, this is going to be less, it's going to be a little

over \$25. You can hardly go out and get a decent breakfast for \$25,

Dr. Paul: [08:59](#) That's right. And any prescription that you get from the pharmacy is going to be way more than that. And you'd have to get it every month or every two weeks, whatever they write it for.

Lynn: [09:14](#) So when we send you a vial, let's say we, we sent you a vial of the arthritis relief and let's say you took your jar of distilled, filtered, good quality spring water, good quality, well water, structured water, just not tap water. So let's say you've got your good quality water in your clear plastic or your clear glass container, you're going to attach or place the vial inside. Now these are the vials I send when we're going warm door to warm door in our warmer weather. But in our cold weather, you're going to get a BPA free plastic vile. And the reason is these won't break and freeze. And sometimes our temperatures get 22 below here in the winter. So even if you're contacting me from the South and you're going, well, it's not that cold here but the problem is, it's that cold up here.

Lynn: [10:19](#) So once you get this and you've set it up and your water's already, and you do this, you put it on, you set it up, and it needs to sit overnight. And then your water, all the water in the jar has been changed to what's in the vial. Now you can take this water and you can fill more vials for you and the people that you've all shared on the purchase of this. You can make some patches for others that they can put on the outside of a container. Or if in the case of arthritis you might be taking these patches and putting them on, let's say it's a sore arm or you might be putting one of your vials in a spray bottle and just spraying your sore arm with that spray bottle and you might also be doing some bandaids. We've talked about that. When Paul treats band-aids, fabric, bandaids, you just treat a bunch of them with about seven drops of the plasma water on the gauze and you place the gauze in an X on one side of the knee? Well, show it with my arm how you do it.

Dr. Paul: [11:43](#) Well, on one side you'd put two band AIDS, which would be just like that. On the other side you just put one bandaid. So that establishes a plasmatic field across here that is striving to balance the energy between the two. Therefore, the plasmatic field moves from one side to the other. Balancing the energies in between, which then gives relief.

Lynn: [12:21](#) So now Paul, if, if they, let's say that I went in with three people and I had ordered this and now we have several vials, maybe

somebody wanted a little more, a bigger vial or they were afraid they would drop it and break it. So they'd rather have the plastic vial and you're going to have some pads, maybe you're going to have a spray bottle. What's the strongest plasma water?

Dr. Paul: [12:50](#) It's all the same. It's duplicated so that everything is the same as in your master jar.

Lynn: [13:04](#) Where'd you go to business school? You're going to tell me, you sent one little vial out and four dozen people can benefit from it.

Dr. Paul: [13:16](#) That's right. That's a really, really poor business model. So you folks can see where either crazy or stupid and I probably prefer to be crazy.

Lynn: [13:31](#) Well, and I'll just share one more thing with you. We had a woman from the Northeastern part of the our country, who was so excited when she found out about plasma energy because she had been getting a small dropper bottle of plasma water once a month with a little dropper vial in it. She took so many drops a day and it cost her \$70 a month and every month she'd get her bottle for the next month. So here we are, we're sending something for \$77 and you never have to purchase it again for that particular combination that you wanted. So we're pretty brilliant in the business division you think?

Dr. Paul: [14:23](#) No, not really.

Lynn: [14:25](#) Well, you know what? The whole idea is that we want to share this technology with everyone, but we do want people to value the time and effort that we've put into it and to respect the gift of what we have with the plasma energy and the knowledge that has been given to us in order to share this plasma energy with you. And since I've shown you these vials, people do ask me where I get them. And I have found these two DRAM glass vials with screw on lids on Amazon and I know you can find them other places. And then this is a, Oh I think these are like 45 cc's. What would you say? 45 mil? Okay. 45 milliliter. And this is more of a like a little travel size and it doesn't have a black lid. It's got a white flip top lid. So we don't want you to open these and dump the contents out. You want to just keep it intact. So this has electrical tape on it to keep that top secure. So these glass vials can go inside of jars and everything quite easily. I'm going to say if you put this inside the water, you may see some black tape unraveling at some point. So you may want to just keep that one on the outside of your container.

Dr. Paul: [16:02](#) Thank you. Think of those as batteries. Think of this as a battery. Now you wouldn't open a battery and take the inside out of it and expect it to work. So don't open these and pour the water out and expected to work cause it won't. So that considered, just treat it like a battery and know that the energy is in there and it will charge up your water and make it usable.

Lynn: [16:40](#) Now there's one more thing that I'll mention since you brought that up once in a while, and gosh, I, it's probably only happened like maybe four times in the, the three plus years that we've been doing this where somebody had some vials that arrived that were broken and I said, don't throw it out because you still have all the energy contained. It's still there. So keep it until you get the replacement that I send. They're I broken. So we pay the shipping, you don't pay the shipping and then we send the replacement. So we just wanted to share that information with you so you know why we've put the prices on things that we have. And if you think about it, when you look at some of the packages we have and that you could have an entire plasma pantry with the plasma energy station and 25 other things that we've made, and we priced it in a way so we don't care if you come in and pick the highest price things or a combination.

Lynn: [18:00](#) It's okay. Cause I know I've done the arithmetic on it and I know that a lot of people are going to look and go, well I'm just going to get all the, the higher price things on this package and then order lesser pricing separately. So I, we've done that deliberately so that we could make this available to more people. So I think that's about it. The brilliant business minds are about done here. So thank you very much for watching. And do you have anything? Oh gosh, we should say what our website is. Plasma energy solution.com and when you go to the homepage, if you will pick the shop feature and then click on that, you will get the product list. And as you scroll through the product list, you'll see that we're adding videos for each of the products. So we're, we're probably only about a third of the way through there. There's a lot more to do to add to that, but it's just so you have a little more information. And so if you like this video, I hope you'll give us a thumbs up. I hope you'll share it with your friends. And there's one other thing for those with us that are dealing on a budget. If you use the word plasma as a coupon at checkout time, you would get 15% off. So is there anything else you'd like to add, Paul?

Dr. Paul: [19:49](#) No. Thank you for taking the time to watch this video. We appreciate your time and effort and if you feel like you've gotten any value from this, give us a big thumbs up. Subscribe

also so you'll get the information when new videos come out.
Thank you for your time and attention.
