

# The Memory of Water Plus the Memory of GANS

---

Plasma Energy Solution offers various combinations of memory water that change the water you drink.

All the *Never-Ending Plasma Energy* combinations are a one-time purchase. The balancing qualities of herbs, vitamins, minerals, supplements, metals, homeopathic remedies, essential oils and foods are in a nano state. This state is called GANS which is gas in the atomic nano solid state. The GANS is the creation of the memory of these herbs, vitamins, minerals, supplements, metals, homeopathic remedies and foods which can take from six weeks to six months, depending on the combination of energies. Once the memory GANS is completed, water is added to it as water also stores memory.

After studying plasma energy technology for several years, Dr. Paul Schmaltz and Lynn Schmaltz began sharing the plasma energy solutions they had developed. They presented a workshop in 2017. On their website you can now find over 100 videos on the many different plasma energy combinations that are being used across the US, Europe, North America, South America, Scandinavia, Crete, Egypt, Australia, New Zealand, South Africa Japan, Thailand, and Viet Nam.

There are many free reports, blogs, testimonials, FAQs and over 100 videos on various Plasma Energy Solution combinations that help the body to achieve balance so that the body can heal itself. The purpose of the work of Dr. Paul and Lynn was to create energies of commonly and not so commonly available metals, minerals, herbs, roots, vitamins, supplements, essential oils and much more in the event that these commonly available body balancing aids might become less available in an economic downturn, or not available at all during a disaster or other crisis. <https://plasmaenergysolution.com>

Dr. Paul started developing *Never-Ending Plasma Energy* products while studying, experimenting and implementing the knowledge he gained from the Keshe Foundation Knowledge Seekers Workshops and Keshe Foundation Medical Workshops. Dr. Paul was no stranger to out-of-the-box approaches to well-being as he was one of the first veterinarians in the US to use acupuncture on animals in

the 1970s which was before acupuncture was a commonly accepted modality for people and animals. Later he studied more types of energy such as orgone energy and Rife energy as well as the power of intention as taught by Wayne Dyer, Kenneth Cohen, Louise Hay, Neville Goddard, Dr. Joe Dispenza as well as ancient texts.

Introduction to Plasma Energies Workshop—Dr. Paul Schmaltz presents introduction to Plasma Energy Technology and his personal success with different applications. Dr. Paul and wife, Lynn show different plasma technology health applications they have both made.

### **Water Has Memory Part 1**

<https://youtu.be/2Z5MIZfUrEg>

Lynn Schmaltz discusses a video on water produced with interviews with Russian, Japanese, Chinese, American, Khazakistan, and Austrian scientists regarding the memory of water.

### **Water Has Memory Part 2**

<https://youtu.be/OlxhU1p5wMc>

**Following is a synopsis of information presented on the memory aspects of water in *A video on Water*. Throughout the following synopsis of this video you will see comments regarding Plasma Energy water from “Notetaker” (Lynn).**

<https://www.youtube.com/watch?v=LZj4pSZj8Q4>

Rustom Roy, Professor of The State University of Pennsylvania: *what we did and what we always do here is very careful work in the nano field. Let us focus on water, but we looked at it from many angles.*”

(Notetaker: Is water the only substance on the planet that can exist as liquid, solid and gas? This has changed with Plasma Energy Solution. The process used by Dr. Paul in making GANS turns solids into Gas In The Nano Solid State. There are videos that provide more explanation of GANS at the website,

<https://plasmaenergysolution.com> )

Video narration (referred to as Video throughout): Experiments around the planet have shown that water has memory. Water can receive and make an imprint of any outside influence, remembering everything that occurs in the space around it. Any substance coming into contact with water leaves a trace in the water. Did our ancestors guess this when they turned ordinary water into healing water by placing it in silver vessels?

Rostum Roy: *it (water in silver containers) is the best antibiotic that is made and is as good in Afghanistan and Iraq. The American Army uses this water to kill the germs in the wound...the President (Trump) uses this water to keep infectious bugs from his hands. How can this be?"*

Video: as it records information water acquires new properties but its chemical composition remains unchanged.

Rostum Roy: *the chemical composition of the water is important and the sensation of news says that is nonsense. The structure of water is much more important than the chemical composition.*

Video: the structure of water means how its molecules are organized. We can see how water molecules join into groups and these are called clusters. Scientists came up with the idea that these clusters work as a memory cell of sorts in which water records the whole history of its relationship with the world as if on magnetic tape.

Rostum Roy: *People don't think that when you turn on the light, the water changes. When you turn on the electric field from the power lines, the water may change. That is the direction of research.*

Video: the water, of course, remains water but its structure like a nervous system reacts to any irritation. Modern instruments have made it possible to record the fact that within each of water's memory cells there are 440,000 information panels each of which is responsible for its own interaction with the environment.

Martin Chaplin, Professor Laboratory Chief of London University Great Britain: *If you consider a cluster as a group of specific molecules it can survive only a short amount of time. But if you consider it a structure whereby molecules can leave and other molecules can come in, the cluster can last effectively for a very long time.*

Video: the stability of the cluster structures confirms the hypothesis that water is capable of recording and storing information.

Rostum Roy: *it (water) may be the single most malleable computer which is like a computer memory; it is a memory of information and you must know how it is arranged. It is like the alphabet. If I give you the alphabet you don't know a word, a letter or a sentence. So, the molecular structure is the alphabet of water and you must make a sentence out of water and you can change the sentence.*

Konstantin Korotkov Doctor of Sciences, Professor Academician of the Russian Academy of Natural Sciences Russia (Dr. Paul studied his research on the effectiveness of shungite and silver in changing harmful torsion fields caused by wifi, cell phones, microwaves, radiation, 4G and 5G): *We have carried out many experiments on the effect that quite diverse samples have on water—magnetic fields, electrical fields, various objects and also including a human presence and human emotions.*

Video: It became clear that positive and negative human emotions are the strongest element of influence. Professor Korotkov's laboratory has conducted numerous experiments on the effect of human emotions on water. A group of people were asked to project onto a flask of water in front of them very positive emotions like love, tenderness and concern. Then the flask was replaced with another one and people were asked to project emotions of a different type—fear, aggression, hatred. After this, measurements were taken on the samples and the water exhibited changes that were clearly in one direction or another.

Korotkov: *so love increases water's energy levels and stabilizes the water while aggressive emotions reduce the energy and make radical changes in the water.*

Dr. Masuro Emoto, Researcher, Japan: *I hope to show people through my research that water has a memory of its own.*

Video: Dr. Emoto's laboratory does research on water samples which are subjected to various forms of outside influence. The impressions made on the water are recorded by swiftly freezing it in a cryogenic chamber.

This photo shows the lack of elaborate structure of water heated in a microwave:

Water Documentary: Water Has Memory (1)

This shows the affect on the water by a mobile telephone:

Somebody said thank you to this water:

The photo shows the effect on water when someone said 'excuse me':

The message on the water in the photo below was ‘you disgust me’:

Video: with modern technology it is possible to structurize water artificially. When seeds were grown under laboratory conditions using this kind of water, the soy sprouts had 6 times photon radiation than when ordinary water was used. Using structurized water makes vegetables ripen faster and increases the amount of useful microelements and vegetable proteins several-fold.

(Notetaker: the type of pebbles was not identified in the video. After studying Japanese and Russian research Dr. Paul Schmaltz used shungite from Karelia Russia in developing New Tech Frequency Relief with shungite, silver GANS and more, plus shungite, silver and magnets for shungite magnets and pendants. All were for relief from effects from wifi, cell phones, radiation, microwave, 4G, 5G, harmful torsion fields and more. There are articles and videos on this information at <https://plasmaenergysolution.com>. Be sure to see testimonials on success with using Plasma Energy water including New Tech Frequency Relief water on plants and bees.)

Wang Guihua, Main Agronomist of The Academy of Agronomical Science, China: *If we look at the shoots the treated ones were long, even and strong while the untreated ones were short, thin and weak. If we look at the plants today, those from the selected seeds have all ripened but the ones from non-selected seeds have not ripened. We have to say that using structurized water really does affect the growth of vegetables and fruit.* (Notetaker: there is an article on the protective energy field around a portion of a farm field in Poland. Wild pigs destroyed all of the corn crop

right before harvesting except for the corner of the field where the farmers had used plasma water either they formulated or someone provided to them. There is a blog done by Lynn on the protection provided to a home and gardens in Dominica during Hurricane Maria that destroyed 90% of the island. The son had made plasma energy water and placed a jar of it in the garden months or years before the hurricane).

Video: for the purposes of irrigation, 20% less of this type of water is needed than when using ordinary water. No fertilizer was added to the soil or the water. The chemical composition remained the same, H<sub>2</sub>O. The only thing that had changed was its structure. At the present time scientists can answer the question of how this happens but science does not yet have an answer as to why.

Video: depending on age a human being is made up of 70 to 90% water; an adult drinks approximately 2.5 liters of water each day in order to sustain his normal life functions. Another 1.5 liters is absorbed through the skin when bathing or showering. Water makes a long and difficult journey before arriving in our homes.

Allois Gruber, Researcher, Austria: *it used to be common knowledge that a settlement could only occur where there was a natural source of water. Today whether or not there is water in a place is of no importance because we transport water for thousands of miles using high pressure.* (Notetaker: when Dr. Paul and Lynn lived in the mountains 2 hours west of Denver they did not have legal access to the river in front of their home. The City of Denver had purchased all the water rights 40 to 50 years before from local ranchers for what seemed like a lot of money at the time. The water is piped through the mountains for Denver. Those who sold the rights don't have the right to use any water from streams, creeks, rivers, lakes or wells).

Video: in nature rivers and streams always flow along a smoothly curving course but any water supply that has multiple right angles turn the natural structure of water breaking it down more and more with each such turn.

Leonid Izvekov, Researcher, Chief of Laboratory Water Structural Research, Russia: *Water from a water supply system which flows into our homes through pipes has various forms, crystals of various forms, but they are all deformed. It may look like the photo below:*

*or have these crystals in many other arrangements as seen in the photo below and you won't see any symmetry or beauty:*

*Allois Gruber: water that flows in floor panel heating system is devitalized and rotten. It sucks energy out of the people, animals and plants living in that house. It actually steals the energy.*

Video: It is well known that the water supply in many cities is a closed loop system. After undergoing aggressive chemical purification and passing through powerful filters, the water in these systems is returned to our homes, still remembering the chemicals and the violence it was subjected to. Even stronger however is the informational pollution that the water accumulates as it flows down miles of long pipes through thousands and thousands of houses and apartments.

*Allois Gruber: We pollute water spiritually and this happens on a huge scale. Why? The water adopts all of the hatred, all of the malice, the stress and the water is almost dead as it enters our bodies.*

Shamil – Hazrat Alyautdinov, Imam-hatyb of the Memorial Mosque, The Poklonnaya Gor, Moscow, Russia: *Science most likely will never find out the exact process by which Adam was created. What went with what and in what proportions? But the Koran, for example, says that water played a part in this by the will of God.*

Martin Chaplin: *I think that scientists should look more closely at how water interacts with their molecules. At a molecular level it creates the structure of DNA; we would not have the DNA helix without water. It creates the structure of proteins, so our bodies would not work without the water.*

Video: fish were introduced into water that had been treated this way and the fish soon produced an unusual hatch of small fry. They differed radically to other fish to which they were related although they looked as much alike as twins.

Alexander Solodilov, Doctor of Sciences, Corresponding Member of the Russian Academy of Natural Sciences: *Three stripes appear on the belly of all these males at once, along with colored spots which had not been observed previously. These are called phenotype changes and it is of fundamental importance that these changes appeared not just in some of the treated fish, but in all of them at the same time. These pheno type changes that we caused are not a hypothesis; they occurred in practice.*

Video: the experiment resulted in changes not only in the outward appearance of the fish, but also in their behavior. They began to react to outside stimuli in the same way. It was as if the whole school had acquired a collective mind.

Alexander Solidonov: *a whole important area of problems came up which had not been studied whatsoever. Therefore, it was decided that it would suffice to establish even just the fact that behavior could change the form of animals using only water, which fact in and of itself, is very significant. If water has such a strong effect, that is, we shouldn't make it public without thoroughly studying this.*

Video: in 1932 sensational news traveled around the world. The American physicists, Harold Ouray and Albert Osborne had discovered that in addition to ordinary water, heavy water also exists in nature—deuterium 20. The splitting of deuterium was the basis of creation of the most destructive bomb, the hydrogen bomb.

Video: everybody knows very well what radioactive radiation can cause, but it turns out that there are even more awesome effects. Rather more horrific is the change in the structure of water covering huge areas, thousands of miles larger than the nuclear weapons testing grounds. It made no difference where the test was carried out—in the atmosphere, in the ground, or underground.

Victor Inyushin, Doctor of Sciences, Professor, Head of The Biophysics Department of The Kazakistan University, Kazakistan: *Colossal changes occur in*

*the water and the water's memory changes and people drink that water. Animals drink it, and suddenly terrible changes take place.*

Video: When the explosion occurs, waves are formed which die out fairly quickly in the ground but the water may continue to fluctuate for another 30 days. Swinging like a pendulum the waves create a new and pathological ordering in the water and it has been noted that the number of suicides rises abruptly after such tests.

Victor Inyushin: *by a factor of 2, 2.5, 3 medical experts have absolutely no explanation for this, but we could understand this. We showed the brain is made of water, about 85%. So these changes take place in the brain and a conflict of the water structures arises. The bioplasm of the brain is disrupted and the result is that the person is deprived of such an important incentive as the drive to live.*

Alexander Solodilov: *we have 2 containers of emulsified crude oil which is a byproduct of oil production, a stable combination of water and oil which remain bound in this state for years. The test sample is irradiated. The element will treat one container for 7 days making the water molecules lessen their contact with the oil molecules. After 4 days we compare the test sample and the control; the water has separated from the oil. At the boundary of the oil and the water there are crater-like formation. This means that the separation process is continuing. The fields we use to influence the water are comparable in intensity with the electromagnetic field of the human heart. On the 7<sup>th</sup> day of treatment the experiment is finished; the water has completely separated from the oil.*

Video: no where in the world is water the same, breaking its way to the surface through minerals and ores. Water assimilates the vibrations of the soil, and information about its specific biological and energetic features.

Konstantin Korotkov: *We tested a sample of purified, municipal water which is sold in large bottles. The producer puts a label on them which says, "it is the best water in the world". But it is empty and dead; true, it's pure and it's good, and some minerals have been added but this is dead water in which there is no energetics and there is no life. Most likely people do not sense any particular difference between naturally pure and artificially purified water but any animal will always choose water from a spring because this water is loaded with natural energies.*

Video: not long ago another unique property of natural water was discovered. It turns out that such natural water is flammable.

Vladimir Voeikov, Doctor of Sciences, Professor of the Biology Faculty of The Moscow State University, Russia: *The burning of natural water, the water itself burns. The reason it burns is precisely that natural water is structured in a natural way. Burning in rigorous scientific terms is a process of oxidation in which heat and light are given off. In the case of water it burns at a temperature of the environment and the light emitted can be recorded by using super sensitive instruments. In burning you have oxygen being continuously activated and some organic matter is continuously burning. So the burning of water is a process that is over an extended period of time. If it were a process that happened more quickly it would have already burned up all the water on earth.*

Dr. Emoto: *let's imagine that here we have a human being and here we have water. This water contains many different types of information. If we introduce this water into the human body then that human body will assimilate this information which may change the person's characteristics.*

Video: let us see how this type of water affects human blood. The doctor is drawing blood from the patient's finger and using a special microscope we should be able to see the condition of her body from this drop of blood.

Perl Laperla, Doctor of Medicine, Immunologist, Nevada: *These are red blood cells and they have lost their electrical charge so they are all stuck together in a formation called a rouleau, here is a symplast and symplasts are associated with heart disease, arthritis, lung disease, and many other conditions that could be coming in the future.* (Notetaker: people who have had blood tests after drinking various Never-Ending Plasma Energy Water combinations have shown improvements. Dr. Paul's lab tests showed that creatinine clearance on his transplanted kidney had improved from 2.2 down to 1.6. At 2.2 the 14 year old transplant was indicating signs of failing, which would be around 2.5. The day after Dr. Paul got his transplant in 2004 the creatinine clearance on the new kidney was 1.7).

Video: the doctor asks the patient to drink a small amount of structured water. After 12 minutes the doctor again draws blood from the patient and studies it.

Dr. Laperla: *you can see that the cells become buoyant, slippery, and they have electrical charge so they repel each other. That allows them to carry oxygen and it*

*means that we are changing the pH of the blood back to an aerobic environment rather than an anaerobic environment. I think that is utterly amazing that just drinking water could do that.*

Video: in 1995 Dr. Masuro Emoto was the first to record musical impressions on water. In his laboratory they presented water with different types of music after which they froze the water and under the microscope they could clearly see the crystals that the water had formed. The music of Bach, Mozart, Beethoven produced beautiful crystals. Heavy rock produced a large blob. Dr. Emoto conducted another ground breaking experiment. He placed rice in 3 separate beakers and covered them with water. Every day for a month he said ‘thank you,’ to one beaker, “you’re an idiot” to the second beaker, and he completely ignored the third one. After one month the rice that had been thanked began to ferment, giving off a strong, pleasant aroma. The rice in the second beaker turned black. The rice that was ignored began to rot.

*Dr. Emoto: this experiment provides an important lesson, especially in regard to how we treat children. We should take care of them, give them attention and converse with them. Indifference does the greatest harm. It may not always be easy to do and almost always it takes practice. Practical experience shows that hatred, rage and even annoyance not only exert a destructive influence on other people but they also give feedback.*

*Allois Gruber, researcher, Austria: Intellectually at the level of thought, a person who sends negative thoughts is polluting his own water, of which his body is 75% to 90% composed and giving it a negative charge.*

Video: Many laboratories around the world have repeatedly carried out an experiment that produces similar results. Water from a single container was divided into 2 portions. One part was subjected to an outside influence that changed the structure and properties of that water. The water in the 2<sup>nd</sup> flask acquired the same structure and the same properties after a certain period of time even if the 2 portions of water were removed from each other by a significant distance.

*Rustum Roy: the water has very important photographic memory and also you can imprint it with very subtle energies even from 10,000 kilometers.*

Video: does that mean that remote communications occur between human beings who are essentially structures composed of water?

Effe Chow, Professor, Member of The Executive Council on alternative Medicine, USA: *so therefore, our actions are very important. Our actions are related to nature, to the whole cosmos. What one does doesn't just affect themselves; it affects other people and the whole universe.*

Video: all of the parts including ourselves and earth are bound together by huge streams of information. A billion people across the earth lack access to safe drinking water. Over 5 million people, half of them children, die from this reason each year. This is ten times more than perish from war each year. If this is left unsolved water may become a source of international conflict in the 21<sup>st</sup> century and already now it is attaining the status of a base resource which is beginning to figure among the political dialogue of countries and people.

Alexander Solodilov: *if you ask the ordinary man on the street today whether or not man and human activity are to blame for the increased number of hurricanes on the planet and their increased destructive force I think that every other person will say 'yes, this is a consequence of human activity.'*

Effe Chow: *I think that what is happening in our world today, the tsunamis and the freak weather, terrorism and the fear that is gripping us...are a result of unhealthy individual health which affects the other way and is the result of water being polluted.*

Dr. Emoto: *there have been many wars on religious grounds in human history, but in our experiment, water reacted to individual words that had a religious content by forming beautiful crystals. This means that the conception of our nature coincides with each religion.*

Video: The Christian religion prayer, the Buddhist prayer, the Muslim prayer all produce beautiful crystals in lab tests. Dr. Emoto presumes that serious crimes are produced in areas most of all where people curse the most often. (Note: tests showed 'idiot', 'I hate you' produced ugly blobs).

Video: laboratory containers of water were inscribed with hieroglyphs denoting words and names of well known people and included 'love,' 'hope', and soul' and produced beautiful crystals.

The universe was created by the Absolute, the Source, which created all that exists and all of its material manifestations. Each of us has an element of the water from the primeval ocean. Our every word is like a waterdrop, a medium of thought, a

source of information and we are all here to repay the Absolute with love and gratitude.
